EXPLANATORY NOTES

1. **Source of Data:** Import statistics are compiled from information appearing on customs import entries and invoices, except for data on electricity. Electricity imports are reported directly by the importing firms to the Dominion Bureau of Statistics.

2. **Coverage:** From January 1, 1964, import statistics include all goods cleared by Customs immediately on arrival in Canada, plus goods which are entered into customs warehouses rather than being cleared on arrival. For 1963 and earlier years import statistics included goods cleared immediately on arrival plus goods cleared out of customs warehouses. The two types of record eventually cover the same totals, except for a small amount of goods which is entered into customs warehouses and then re-exported. There may, however, be an important difference in the time at which warehoused goods are recorded as imports; some shipments which enter customs warehouses remain there for several months before clearance. A more detailed discussion of this change appears on pages under the title "New Basis of Compiling Trade Statistics".

   Both in 1964 and in earlier years, import statistics excluded the following commodity movements (some of these are recorded separately as Special Transactions — Non-trade in Table 3 of this report): gold and gold products where the value of the gold content is 80 per cent or more of the total value (a small amount of gold scrap in the form of jewellers' sweepings is included in class 258-99); current coin; settlers' effects; private donations and gifts; tourists purchases exempt from duty; goods imported by foreign armed forces or diplomats stationed in Canada (or brought back by Canadian armed forces or diplomats returning from postings outside Canada); temporary imports for exhibition or competition (and film imported for exhibition or processing or returned after exhibition or processing abroad); ships of British construction and registry imported for use in Canada, and ships and aircraft purchased for use as international carriers but not used to carry goods between points in Canada, bunker supplies and ships' stores purchased by Canadian vessels or aircraft abroad; generally, all temporary imports and goods merely moving in transit through Canadian territory.

3. **Countries credited:** Imports are credited to the country in which the goods were located when first directed to Canada, except for goods produced in Central or South America but first consigned to Canada from the United States, which are credited to the country of origin.

4. **Quantities:** Units of quantities used in this report are those specified for each class in the Import Commodity Classification, Vol. I, (DBS Catalogue No. 12-524). Where no unit of quantity is specified, a small dash appears in the quantity columns. Units of weight or volume relate to the weight or volume of the goods, and exclude the weight or volume of any packing required for shipment except in certain cases otherwise defined in the Customs Tariff. Units of number refer to the number of complete (or substantially complete) units imported, excluding parts (for any class where the recorded value includes both complete units and parts of these units, the average value per complete unit cannot be calculated). All units of quantity used in Canadian import statistics are defined on page 7 under "Abbreviations, Definitions and Units of Quantity".

NOTES EXPLICATIVES

1. **Source des données:** La statistique des importations est tirée de renseignements qui paraissent dans les déclarations et les factures de douane, sauf dans le cas des importations de l'électricité. Les importations de l'électricité sont déclarées directement par les compagnies importatrices au Bureau fédéral de la statistique.

2. **Couverture:** La statistique des importations comprend depuis le 1er janvier 1964, toutes les marchandises dédouanées des leur arrivée au Canada plus les marchandises entreposées à la douane à leur arrivée, au lieu d'être immédiatement dédouanées. Pour 1963 et les années antérieures, la statistique des importations comprend les marchandises dédouanées dès leur arrivée plus les marchandises dédouanées des entrepôts de la douane pour consommation. Eventuellement, les deux formes de documents donnent les mêmes chiffres, sauf dans le cas d'une petite quantité de marchandises entreposées à la douane et ensuite réexportées. Il peut y avoir, toutefois, une grande différence entre le moment où les marchandises sont entreposées et celui où elles sont consignées comme importations; certaines marchandises entreposées à la douane attendent leur dédouanement pendant plusieurs mois. Une description plus détaillée du changement paraît sur les pages sous le titre "Nouvelle base de la statistique du commerce".

   Pour 1964 et pour les années antérieures la statistique des importations ne comprend pas les mouvements de marchandises suivants (certains sont classés séparément comme transactions spéciales — hors commerce au Tableau 3 du présent rapport): l'or et les articles en or dont la valeur de la teneur en or représente 80 p. 100 ou plus de la valeur totale (une petite quantité de déchets d'or sous forme de balayures de bijoutiers est comprise dans la classe 258-99); la monnaie courante; les effets d'immigrants; les dons et cadeaux privés; les achats des touristes exempts de douane; les marchandises importées par les forces armées ou les diplomates étrangers en poste au Canada (ou rapportées par les forces armées ou les diplomates canadiens rentrant de leur service hors du Canada); les importations provisoires pour expositions et concours (et les films importés pour projection ou développement ou retournés à l'étranger après projection ou développement; les navires de construction et d'immatriculation britanniques pour usage au Canada, et les navires et les avions achetés pour usage comme transporteurs internationaux et non pour le transport de marchandises d'un endroit à un autre au Canada, les approvisionnements de saute et de bord achetés à l'étranger par les navires et les avions; en général toutes les importations provisoires et les marchandises ne faisant que passer par le territoire canadien.

3. **Pays de provenance:** Les importations sont créditées au pays où les marchandises étaient situées avant leur acheminement vers le Canada, sauf les marchandises produites en Amérique centrale ou en Amérique du Sud et expédiées au Canada des États-Unis, lesquelles sont attribuées au pays d'origine.

4. **Quantités:** Les unités de quantités employées dans le présent rapport sont celles déterminées pour chaque classe dans la "Classification des marchandises d'importations", Vol. I (B.F.S. numéro de catalogue 12-524). Lorsque l'unité de quantité n'est pas requise, un petit tiret s'inscrit dans les colonnes de la quantité. Les unités de poids ou de volume visent le poids ou le volume des marchandises à l'exclusion de l'emballage nécessaire à l'expédition, sauf dans certains cas spéciaux définis dans le Tarif douanier. Les unités de nombre visent le nombre d'articles complets (ou suffisamment complets) importés, sauf les pièces de rechange (dans toute catégorie où la valeur inscrite comprend les unités complètes et leurs pieces, la valeur moyenne par unité complète ne peut être calculée). Toutes les unités de quantité employées dans la statistique canadienne des importations sont expliquées en page 7 sous la rubrique "Abréviations, définitions et unités de quantité".

5. **Values:** The value of goods imported is usually the value as determined for customs duty. In most cases, this corresponds to the value shown on the invoice accompanying the goods, converted to Canadian dollars at authorized exchange rates (usually the commercial rate prevailing on the date on which the goods were actually despatched to Canada). The Canadian Customs Act generally requires the valuation of goods f.o.b. point of shipment in the country of export, but in recent years importers have often reported c.i.f. values for free goods or goods subject to specific rates of duty. An effort is made to ensure that f.o.b. values are consistently used in import statistics in the following cases: goods subject to dumping duty (from January, 1959); raw cotton and crude petroleum (from January, 1962, retroactive to January, 1960); raw sugar (from January, 1963, retroactive to January, 1961); and all shipments individually valued at $100,000 or more (from January, 1964). Only about one fifth of the value of imports is covered by those specific checks.

5. **Valeurs:** Ordinairement, la valeur des marchandises importées est la valeur déterminée pour fins de douane. Dans la plupart des cas, la valeur en douane correspond à la valeur indiquée sur les factures qui accompagnent les marchandises, convertie en dollars canadiens au taux d'échange autorisé (habituellement le taux commercial à la date où les marchandises ont été effectivement expédiées au Canada). La loi canadienne sur les douanes exige généralement l'évaluation des marchandises f.à b. au point d'expédition dans le pays exportateur mais, ces dernières années du moins, les importateurs ont souvent déclaré la valeur c.a.f. pour les marchandises en franchise ou les marchandises sujettes à un tarif déterminé. On s'efforce d'assurer que la valeur f.à.b. soit régulièrement employée dans la statistique des importations suivantes: les marchandises sujettes au tarif de dumping (depuis janvier 1959) le coton brut et le pétrole brut (depuis janvier 1962, avec effet rétroactif à janvier 1960); le sucre brut (depuis janvier 1963, avec effet rétroactif à janvier 1961); et toutes les expéditions évaluées à $100,000 ou plus chacune (depuis janvier 1964). Ces contrôles déterminés ne couvrent qu'un cinquième environ de la valeur des importations.

NEW IMPORT COMMODITY CLASSIFICATION

Effective January 1,1964, a new Import Commodity Classification (MCC) was introduced. This new classification is based on the Standard Commodity Classification which was developed in the Dominion Bureau of Statistics as a tool for integrating statistical series derived from various sources.

A second edition of the Import Commodity Classification was made necessary by the renumbering of all items of the Customs Tariff in August, 1965. This edition was delayed until January, 1966, to permit inclusions of numerous class changes effective at that time. (Catalogue No. 12-524, Volume I, 1966).

The information presented in the present report, "Trade of Canada, Volume III, Imports, 1963-1964", is entirely based on the original January, 1964 Import Commodity Classification, Volume I, but the following descriptive notes would also generally apply to the 1966 edition.

The MCC is divided into seven "Sections" as follows:

Section	Title	Classes
I	Live animals	1-19 to 9-99
II	Food, feed, beverages and tobacco	11-09 " 183-99
III	Crude materials, inedible	201-10 " 291-99
IV	Fabricated materials, inedible	301-10 " 496-99
V	End products, inedible	501-19 " 961-99
VI	Special transactions – Trade	970-10 " 970-99
VII	Special transactions – Non-trade	990-05 " 995-89

Section I contains all live animals except live fish and other seafoods shipped for use as food, which are included in Section II.

Section II contains all other commodities whose chief end use is as food, feed, beverages or tobacco. Because any commodity at one stage of processing is located in only one place in the classification, certain non-food grades of chiefly food commodities (e.g. seed wheat and seed potatoes) are classified in this section, and certain food grades of chiefly non-food commodities (e.g. edible tallow and vegetable oils) are excluded. Within this section the commodities are further classified by component material and stage of processing.

Section III contains all commodities whose chief use is as materials for industry, and which have not been processed beyond the stage of cleaning, sorting or concentrating, together with the synthetic equivalents of some natural materials. Waste and scrap materials which are principally used for the same purpose as particular crude materials are included with those materials; other waste and scrap materials are grouped at the end of the section. Within this section the commodities are further classified by component material.

Section IV contains all commodities which have passed the preliminary stages of processing but which are still used chiefly as materials in some later industrial process. Some commodities in this section are highly processed and the chief part of their value may be derived from manufacturing. But all have in common the basic characteristic of materials, i.e., they will be subjected to (or used up in) further industrial operations in the course of which their form will be changed or their identity lost. Within this section the commodities are further classified chiefly by component material.

Section V contains all commodities which will not lose their identity through further processing, and which are commonly regarded as articles rather than as materials, together with finished identifiable parts, attachments and accessories of these articles. Within this section the commodities are further classified chiefly by principal use or function.

NOUVELLE CLASSIFICATION DES MARCHANDISES D'IMPORTATION

Une nouvelle Classification des marchandises d'importation (C.M.I.) est entrée en vigueur le 1er janvier 1964. Elle se fonde sur la classification type des marchandises mise au point au Bureau fédéral de la statistique en vue de l'intégration des séries statistiques tirées de diverses sources.

Le renumérotage de tous les postes du tarif douanier en août 1965 a nécessité une seconde édition de la Classification des marchandises d'importation. Cette édition a été retenue jusqu'à janvier 1966 afin de permettre l'inclusion de nombreux changements apportés aux classes et entrés en vigueur à cette date. (Numéro de catalogue 12-524, Volume I, 1966).

Les renseignements contenus dans le présent rapport "Commerce du Canada, Volume III, Importations, 1963-1964" sont basés en entier sur la Classification originale des marchandises d'importation de janvier 1964, Volume I, mais les notes descriptives qui suivent s'appliquent aussi, en général, à l'édition de 1966.

La C.M.I. se répartit entre les sept "sections" suivantes:

Section	Titre	Classes
I	Animaux vivants	1-19 à 9-99
II	Aliments, provendes, boissons et tabacs	11-09 " 183-99
III	Matières brutes non comestibles	201-10 " 291-99
IV	Matières travaillées non comestibles	301-10 " 496-99
V	Produits finis non comestibles	501-19 " 961-99
VI	Transactions spéciales – commerciales	970-10 " 970-99
VII	Transactions spéciales – hors commerce	990-05 " 995-89

Section I contient tous les animaux vivants sauf le poisson vivant et autres fruits de mer expédiés pour usage alimentaire et qui sont compris dans la Section II.

Section II contient toutes les autres denrées qui servent principalement d'aliments, de provendes, de boissons ou de tabacs. Étant donné qu'une denrée à un stade de transformation ne se trouve qu'à un seul endroit dans la Classification, certaines qualités non alimentaires de denrées surtout alimentaires (e.g. blé de semence, pommes de terre de semence) sont classées dans la présente section et certaines qualités alimentaires de denrées surtout non alimentaires (suif comestible et huiles végétales) sont exclues. Dans la section même, les produits se subdivisent en outre suivant la matière constituante et le stade de fabrication.

Section III contient tous les produits qui servent principalement de matières premières dans l'industrie et qui n'ont pas été transformés au-delà du nettoyage, du triage ou de la concentration, de même que les équivalents synthétiques de certaines matières naturelles. Les déchets et les matières de rebut qui servent principalement à la même fin comme matières brutes particulières sont incluses dans ces matières; les autres déchets et rebuts sont groupés à la fin de la section. Dans la section même, les produits se subdivisent en outre suivant la matière constituante.

Section IV contient tous les produits qui ont passé par les premiers stades de la transformation mais qui servent encore principalement de matières à quelque fin industrielle ultérieure. Certaines marchandises de cette section sont très ouvrées et la majeure partie de leur valeur peut venir de leur transformation. Toutes, cependant ont en commun la caractéristique de base de matières, c.-à-d. qu'elles seront soumises (ou serviront) à de plus amples transformations industrielles au cours desquelles leur forme sera modifiée et leur identité perdue. Dans la section même, les produits se subdivisent en outre principalement suivant la matière constituante.

Section V contient toutes les marchandises qui ne perdront pas leur identité par une plus ample transformation et qui sont ordinairement tenues pour des articles plutôt que des matières ainsi que leurs pièces et accessoires. Dans la section même, les produits se subdivisent en outre principalement suivant leur usage ou leur fonction.

Section VI contains certain essentially commercial transactions which are not, for various reasons, classified by commodity in trade statistics; some import packing, all goods previously exported from Canada which are returned to Canada within five years after having been exported, and small value shipments. The value of these transactions is included in published totals of Canadian imports.

Section VII contains certain transactions which do not have an international financial implication or which, for various reasons, are better considered separately from merchandise trade in economic analysis, e.g.: gold, settlers' effects and tourist purchases. The value of these transactions is not included in published totals of Canadian trade, but statistics are compiled because they have independent value.

The introduction of the Import Commodity Classification (MCC) in January, 1964 created serious difficulties in making accurate comparisons between statistics for 1964 and those for earlier years. The comparisons given in the body of this report are based on a careful study of data for two months (February 1961 and June 1963) which were coded to both the former classification and the 1964 MCC and cross-tabulated. This study was supplemented by further studies of the content of the large "n.o.p." classes of the former classification, of office rulings, and of other unpublished records. The Convertibility Key for 1963 and 1962 figures which was derived from these studies is presented in the following pages. This key supersedes that originally published in the January, 1964 issue of "Imports by Commodities" (Catalogue No. 65-007) and in the January-March, 1964 issue of "Imports by Countries" (Catalogue No. 65-006). It contains minor revisions for the 1963 conversion and provides a convertibility key for 1962 figures for the first time.

Numerous new classes were introduced in January, 1963, other former classes were renumbered and important changes in the contents of the former 1962 classes took place in 1963 so that it was felt necessary to produce a different conversion key for 1963 and 1962.

This key differs in several respects from the information presented in Volume I of the "Import Commodity Classification", January, 1964 and from the revised edition, January, 1966. In particular, the studies on which it is based are somewhat more comprehensive than those available when the MCC was prepared or revised, and a number of errors in the original presentation have been corrected in this key. A difference in the purpose of the classification and the key also affects their content: the classification shows for each MCC class all the principal former classes from which an MCC class was derived. The key on the other hand shows only those former classes from which a major part of the value of each MCC class was derived. It is much more applicable to problems of statistical analysis.

The key makes it possible to obtain accurate 1963 and 1962 totals for all sections and divisions of the new classification. The number of comparable groups and classes is shown in Table I and the value of trade in each comparability grouping appears in Table II.

The experience gained in converting 1960 export statistics to the 1961 Export Commodity Classification (see Catalogue No. 65-202, 1961-1962), permitted the adoption of better conversion techniques, expecially for large classes and "n.o.p." classes.

1. In this key the 1963 and 1962 classes which do not convert to a single MCC class but do fall entirely within a single MCC group are coded to the residual class of the group. Where the group contains more than one residual class, or where a 1964 group has no true residual class, an artificial group residual class was created.

Section VI contient certaines transactions essentiellement commerciales qui, pour diverses raisons, ne se classent pas par marchandise dans la statistique du commerce; certains emballages d'importation, toutes les marchandises exportées antérieurement et retournées au Canada dans les cinq ans qui suivent leur exportation, et les expéditions de faible valeur. La valeur de ces transactions est comprise dans les totaux publiés des importations canadiennes.

Section VII contient certaines transactions qui n'ont pas de signification financière internationale ou qu'il est préférable, pour diverses raisons, de traiter séparément du commerce des marchandises pour fin d'analyse économique, par exemple, l'or, les effets d'immigrants et les achats des touristes. La valeur de ces transactions n'est pas comprise dans les totaux du commerce canadien mais la statistique en est établie en raison de leur valeur indépendante.

L'entrée en vigueur de la Classification des marchandises d'importation (C.M.I.) en janvier 1964 a compliqué singulièrement l'établissement de comparaisons exactes entre la statistique de 1964 et celle des années antérieures. Les comparaisons données dans le présent rapport sont fondées sur une étude attentive des observations de deux mois (février 1961 et juin 1963), qui ont été codées suivant l'ancienne classification et suivant la C.M.I. de 1964, et ensuite recoupées. Cette étude a été complétée par d'autres études du contenu des grandes classes "n.d.a." de l'ancienne classification, des décisions internes et d'autres documents inédits. La Clé de convertibilité pour les chiffres de 1963 et 1962, établie à la suite de ces études, paraît dans les pages qui suivent. Elle remplace celle qui a paru au début dans l'édition de janvier 1964 de *Imports by Commodities* (numéro de catalogue 65-007) et dans l'édition de janvier-mars 1964 de *Imports by Countries* (numéro de catalogue 65-006). Elle contient de légères modifications pour la conversion de 1963, et pour la première fois, fournit une clé de convertibilité pour les chiffres de 1962.

De nombreuses classes nouvelles ont été introduites en janvier 1963, d'autres anciennes classes ont été renumérotées, et d'importants changements sont intervenus en 1963 dans le contenu des anciennes classes de 1962 de sorte qu'il a fallu mettre au point une clé de conversion différente pour 1963 et 1962.

La clé diffère à divers points de vue des renseignements contenus dans le Volume I de la "Classification des marchandises d'importation", de janvier 1964, et de l'édition revisée de janvier 1966. En particulier, les études sur lesquelles elle se fonde sont un peu plus complètes que celles qui existaient lors de l'établissement ou de la revision de la C.M.I. et un certain nombre d'erreurs dans la présentation initiale ont été corrigées. Une différence d'objet influe aussi sur le contenu de la classification et de la clé: la classification montre pour chaque classe de la C.M.I. toutes les anciennes classes principales d'où est tirée une classe de la C.M.I. D'autre part, la clé ne montre que les anciennes classes d'où est tirée une partie importante de la valeur de chaque classe de la C.M.I. Elle est beaucoup plus adaptable aux problèmes de l'étude statistique.

La clé permet d'obtenir des chiffres exacts, pour 1963 et 1962, à l'égard de toutes les sections et divisions de la nouvelle classification. Le nombre de groupes et classes comparables paraît au tableau I, et la valeur du commerce dans chaque groupement de comparabilité, au tableau II.

L'expérience acquise lors de la conversion de la statistique des exportations de 1960 à la Classification des marchandises d'exportation de 1961 (voir numéro de catalogue 65-202, 1961-1962)a permis d'adopter de meilleures techniques de conversion, dans le cas, surtout, des grandes classes et des classes "n.d.a.".

1. Dans cette clé, les classes de 1963 et 1962 qui ne sont pas ramenées à une classe unique de la C.M.I., mais s'inscrivent entièrement dans un seul groupe de la C.M.I. sont codées dans la classe résiduelle du groupe. Lorsqu'un groupe contient plus d'une classe résiduelle, ou là où un groupe de 1964 n'a pas de vraie classe résiduelle, une classe résiduelle artificielle du groupe a été établie.

2. When analysis revealed that a definite proportion of a large former class constituted a major part of any MCC group, without being applicable to a single MCC class, this proportion was also allocated to the group residual.

3. All former classes which did not fall within a single MCC group but did fall in different groups within a single MCC division were coded to an artificial division residual class.

4. All former classes which did not fall within a single MCC divisions were prorated among the division to which they pertain in the proportions determined by various studies.

In applying rule 4, three possibilities were recognized. Whenever a prorated portion of such 1963 or 1962 classes pertained entirely to one class in an MCC division, and made possible a valid class level comparison, it was coded to the MCC class in question. Similarly, prorated portions pertaining entirely to a particular MCC group and completing a group level comparison, were coded to that group's residual class. If neither of these conditions was met, the prorated portions were assigned to the division residual class.

In two cases division-type residual classes were created at a sub-division level. Textiles were prorated on the basis of two sub-divisions: broad woven fabrics (groups 371-377) and other textile fabricated materials (groups 381-389). It was not necessary to use sub-division 360-00 for the allocation of yarn, thread, cordage and batts (groups 360-369).

Three sub-divisions were used for chemicals: inorganic chemicals (groups 400-405), organic chemicals (groups 406-413) and chemical products (groups 415-429).

While division and sub-division residuals always complete the value for the division or sub-division in question, a group residual class may or may not complete the value for the group, or may contain in addition small values from other groups within the division which could invalidate a comparison. Footnotes in the Convertibility Key indicate whether or not group residuals complete group values or contain values which normally would pertain in small proportions to various other groups within the division. In general, no attempt was made to prorate classes with annual values below $100,000; this is usually why certain group residuals contain parts of other groups within their respective divisions.

The Convertibility Key has some major limitations:

(a) the test months (February, 1961 and June, 1963) which served as the base for calculations were not necessarily representative of all classes, especially those subject to seasonal variations, and therefore comparisons for individual classes, months, or quarters may not be valid;

(b) studies of large "n.o.p." classes were conducted from annual records, and revealed that large values for some commodities can be the result of a few irregular large shipments; this would also invalidate monthly comparisons;

(c) the analysis was conducted at the class total level, not the class-by-country level.

It is nevertheless believed that the class level and division level comparisons derived from this key will be generally adequate even for individual months and countries.

2. Lorsque l'étude révélait qu'une proportion définie d'une ancienne classe importante en valeur formait une partie importante de quelque groupe de la C.M.I., sans s'appliquer à une classe unique de la C.M.I., cette proportion était aussi attribuée à la classe résiduelle du groupe.

3. Toutes les anciennes classes qui ne tombaient pas dans un seul groupe de la C.M.I. mais s'inscrivaient dans différents groupes au sein d'une seule division de la C.M.I. étaient attribuées à une classe résiduelle artificielle de la division.

4. Toutes les anciennes classes qui ne tombaient pas dans une division unique de la C.M.I. ont été réparties au prorata entre les divisions auxquelles elles appartiennent dans les proportions déterminées par les diverses études.

Dans l'application de la règle 4, trois possibilités ont été reconnues. Chaque fois qu'une portion répartie au prorata de telles classes de 1963 ou 1962 appartenait entièrement à une classe dans une division de la C.M.I. et permettait une comparaison valable au niveau de la classe, elle était codée dans la classe en question de la C.M.I. De même, les portions fixées au prorata appartenant entièrement à un groupe particulier de la C.M.I. et complétant une comparaison au niveau du groupe ont été attribuées à la classe résiduelle de ce groupe. Si aucune de ces conditions n'était réalisée, les portions au prorata étaient attribuées à la classe résiduelle de la division.

Dans deux cas, il a été établi des classes résiduelles division-type à un niveau de subdivision. Les textiles ont été répartis au prorata, sur la base de deux subdivisions: tissus larges (groupes 371-377) et autres ouvrages en matières textiles (groupes 381-389). Il n'a pas été nécessaire d'utiliser la subdivision 360-00 pour l'attribution des filés, fils, cordages et ouate (groupes 360-369).

Trois subdivisions ont été utilisées pour les produits chimiques: produits chimiques inorganiques (groupes 400-405), produits chimiques organiques (groupes 406-413) et produits chimiques (groupes 415-429).

Bien que les classes résiduelles de divisions et de subdivisions complètent toujours la valeur de la division ou de la subdivision en question, une classe résiduelle de groupe peut ou non compléter la valeur du groupe ou peut contenir en outre de petites valeurs venant d'autres groupes au sein de la division qui pourraient rendre nulle une comparaison. Les renvois dans la Clé de convertibilité indiquent si les classes résiduelles de groupes complètent ou non la valeur du groupe ou contient des valeurs qui normalement appartiendraient en petites proportions à divers autres groupes dans la division. En général, on n'a pas tenté de fixer au prorata les classes où la valeur annuelle est inférieure à $100,000; c'est pourquoi, ordinairement, les classes résiduelles de groupes contiennent des parties d'autres groupes dans leurs divisions respectives.

La Clé de convertibilité contient certaines réserves importantes:

a) les mois de contrôle (février 1961 et juin 1963) qui ont servi de base aux calculs ne représentaient pas nécessairement toutes les classes, celles surtout qui sont sujettes aux variations saisonnières, de sorte que les comparaisons quant aux classes, aux mois ou aux trimestres ne sont peut-être pas valables;

b) des études des grandes classes importantes en valeur "n.d.a." ont été faites à partir de données annuelles; elles ont révélé que des valeurs élevées dans le cas de certaines marchandises peuvent résulter de quelques fortes expéditions irrégulières, ce qui, aussi, rendrait nulles des comparaisons mensuelles;

c) l'étude a été faite au niveau du total de la classe et non au niveau de la classe par pays.

On est d'avis, cependant, que les comparaisons au niveau de la classe et au niveau de la division tirées de cette clé seront, en général, suffisantes, même pour chaque mois et chaque pays.

The tables illustrate clearly that, notwithstanding the change in classification effective January, 1964 comparisons between statistics based on the 1964 Import Commodity Classification are possible for a significant proportion of Canada's import trade in 1963 and 1962. For 62% and 59% of the classes of the new classification a simple comparison can be made with 1963 and 1962 statistics respectively and

Les tableaux indiquent clairement qu'en dépit du changement apporté à la classification en janvier 1964, les comparaisons entre la statistique fondée sur la Classification des Marchandises d'Importation de 1964 sont possibles pour une proportion considérable du commerce d'importation du Canada en 1963 et 1962. Dans 62 p. 100 et 59 p. 100 des classes de la nouvelle classification, une comparaison simple peut se faire entre la statisti-

these classes accounted for 56% in 1963 and 53% in 1962 of the value of import trade. In 1963, 62% of the groups accounting for 63% of the value were comparable while in 1962, 61% of the groups accounting for 62% were comparable.

The tables also reveal the greater emphasis placed on end products and fabricated materials than in the old classification: For end products only 46% of the classes for both 1963 and 1962 accounting for 32% in 1963 and 30% in 1962 of the total value of imports are suitable for comparison purposes. For fabricated materials the pattern is less extreme; comparisons are possible for 64% and 58% of the classes and 51% and 50% of the groups in 1963 and 1962 respectively accounting for some 60% of the value for both classes and groups for each year.

que de 1963 et celle de 1962 respectivement. Ces classes représentaient 56 p. 100 en 1963 et 53 p. 100 en 1962 de la valeur des importations. En 1963 et 1962, 62 p. 100 et 61 p. 100 respectivement des groupes (comptables pour 63 p. 100 et 62 p. 100 de la valeur) étaient comparables.

Les tableaux révèlent également qu'on attache plus d'importance aux produits finis et aux matières travaillées que dans l'ancienne classification. Pour les produits finis, 46 p. 100 seulement des classes, en 1963 comme en 1962 (représentant 32 p. 100 en 1963 et 30 p. 100 en 1962 de la valeur totale des importations) se prêtaient à la comparaison. Dans le cas des matières travaillées, la courbe n'était pas aussi prononcée; des comparaisons sont possibles pour 61 p. 100 et 58 pl 100 des classes et 51 p. 100 et 50 p. 100 des groupes en 1963 et 1962 respectivement; cela représente quelque 60 p. 100 de la valeur des classes et des groupes.

NEW BASIS OF COMPILING TRADE STATISTICS

(Effective January 1, 1964)

Trade can conveniently be recorded at two points. One in the national frontier, the point at which goods enter into or pass beyond the control of the national government. The other is the "custom frontier", the point at which imports leave customs supervision or exports enter it. Records taken at the national boundary are known as "General Trade" statistics; records taken at the customs boundary as "Special Trade" statistics. Statistics of the same trade compiled in these two ways can differ in both magnitude and timing.

The chart below illustrates the principal flows involved in these two systems of compiling trade statistics. The arrows in the chart indicate the following movements of goods:

(1) Most imports cross the national boundary and are immediately (or within a few days) cleared through customs for domestic use.

(2) A growing proportion of imports crosses the national boundary and is then stored in a customs warehouse under customs supervision, rather than being cleared for domestic use. Some countries also have "free ports" and bounded processing establishments which are analogous to customs warehouses, but these are not now used in Canada.

(3) Most of the goods stored in customs warehouses are eventually cleared through customs for domestic use, but only after some weeks or months have passed.

(4) Most exports leave the domestic economy and immediately pass beyond the national boundary.

(5) A small proportion of exports consists of goods entered into customs warehouses and later re-exported without ever having been cleared for domestic use.

(6) Direct transit trade consists of goods which enter the national territory with the purpose of passing to some other country. These goods remain under customs supervision as long as they are within the national boundary. There are no statistical records of this movement.

NOUVELLE BASE DE LA STATISTIQUE DU COMMERCE

(En vigueur le 1er janvier 1964)

Les échanges commerciaux peuvent être enregistrés commodément à deux endroits, dont la frontière du pays, endroit où les marchandises tombent sous le contrôle du gouvernement national ou passent au-delà, et la frontière douanière, endroit où les importations sortent du contrôle de la douane et les exportations y entrent. Les données consignées à la frontière nationale s'appellent statistiques du "commerce général" et les données consignées à la frontière douanière, statistiques du "commerce spécial". Les statistiques du même commerce établies de ces deux façons peuvent différer quant à leur ampleur et à la périodicité.

Le graphique ci-dessous illustre les principaux mouvements que supposent les deux systèmes de calcul. Les flèches indiquent les mouvements suivants des marchandises:

(1) La plupart des importations passent par la frontière nationale; elles sont immédiatement (ou dans les quelques jours) dédouanées pour consommation intérieure.

(2) Une proportion croissante d'importations passe la frontière nationale pour être ensuite entreposée sous la surveillance de la douane plutôt que dédouanée pour consommation intérieure. Certains pays ont aussi des "ports libres" et des établissements de transformation analogues aux entrepôts douaniers; il n'en existe pas au Canada.

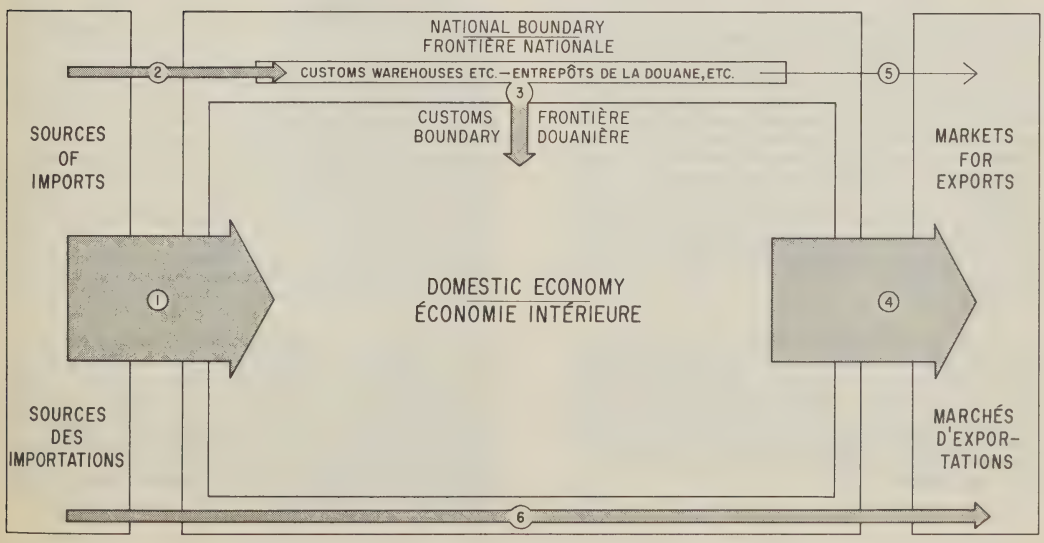

(3) La plupart des marchandises entreposées à la douane sont éventuellement dédouanées pour consommation intérieure, mais après un certain nombre de semaines ou de mois.

(4) La plupart des exportations quittent l'économie intérieure et passent immédiatement au-delà de la frontière nationale.

(5) Une petite proportion des exportations se compose de marchandises entrées dans les entrepôts douaniers et plus tard réexportées sans jamais avoir été dédouanées pour consommation intérieure.

(6) Le commerce en transit direct se compose de marchandise qui pénètrent en territoire national en vue de leur expédition vers quelque autre pays. Ces marchandises demeurent sous le contrôle de la douane aussi longtemps qu'elles sont en territoire national. Il n'existe pas de statistiques de ce mouvement.

THE FLOW OF FOREIGN TRADE
LE MOUVEMENT DU COMMERCE ÉTRANGER

Until 1964, Canada's trade statistics were of the "Special Trade" type. Imports therefore included the movements indicated by arrows 1 and 3, exports the movement indicated by arrow 4. As of January 1, 1964, Canada's trade statistics are being compiled on the "General Trade" basis. Imports therefore include the movements indicated by arrows 1 and 2, exports the movements indicated by arrows 4 and 5. Direct transit trade (arrow 6) is not included in statistics under either the Special Trade or the General Trade system.

Until recently it appeared to make little difference whether Canadian trade was recorded on one basis or the other. During the period 1952-1961, goods passing through customs warehouses fluctuated between 3.1% and 2.4% of all imports, and re-exports from customs warehouses exceeded $5 million only in 1952, 1953 and 1961. Although from 1955 there was an apparent growth in warehouse stocks each year, the amounts involved were small, exceeding $10 million only in 1956 and 1959.

This situation changed when surcharges were imposed on most imports in June, 1962, as a temporary exchange conservation measure. Importers who had not previously used customs warehousing facilities began to keep stocks in customs warehouses in the hope that the surcharges would be cancelled before the goods were required. In some cases importers found that this step reduced their costs, since money no longer had to be borrowed to pay import duties in advance of the time that goods were actually required. The result was a sharp increase in the proportion of imports passing through customs warehouses, and increase which continued even after the cancellation of the surcharges in April, 1963. Imports entered into customs warehouses rose from $143 million in 1961 to $188 million in 1962 and $284 million in 1963.

This change began to create statistical problems in the latter part of 1962. There was an increase in discrepancies between Canadian records of trade in certain commodities and the statistics of partner countries. This raised the question as to whether Canada's statistics would be more useful if related to actual goods movements rather than to the technicalities of customs clearance. When it became clear that the trend towards an increased use of customs warehouses was continuing even after the cancellation of the surcharges, it was decided to change the basis on which Canadian trade statistics were compiled.

Over a period of years, the totals of Canadian exports or imports will be almost the same on either the General Trade or Special Trade basis, because of the negligible size of exports ex-warehouse. There can be a significant difference in import totals for individual years because goods which are entered into warehouse in one calendar year may not be cleared until the following year, and warehouse stocks may fluctuate in size with movements in interest rates or in general business activity. There is likely to be a measurable change in the seasonal variation of monthly import totals. It is generally true that more goods are entered into customs warehouses than are cleared from warehouse during the months when the St. Lawrence system is open for navigation, and that more goods are cleared from than entered into warehouse when the St. Lawrence system is closed. The change in the basis of recording import statistics will therefore tend to accentuate the existing seasonal fluctuation of the import totals.

It will not be feasible to adjust detailed statistics of Canadian trade for 1963 and earlier years to the new basis. Totals calculated on both systems were published in the 1964 monthly bulletin "Summary of Foreign Trade" (DBS Catalogue No. 65-001). Other monthly and quarterly Trade of Canada publications show General Trade (new basis) figures for 1964, but comparative figures for 1963 and earlier years remain on the Special Trade basis on which they were originally compiled.

Jusqu'à 1964, les statistiques du commerce du Canada étaient du type "commerce spécial". En conséquence, les importations comprenaient les mouvements indiqués par les flèches 1 et 3, et les exportations, les mouvements indiqués par la flèche 4. À compter du 1er janvier 1964, les statistiques du commerce du Canada se fondent sur le "commerce général". En conséquence, les importations comprennent les mouvements indiqués par les flèches 1 et 2, les exportations, les mouvements indiqués par les flèches 4 et 5. Le commerce "en transit direct" (flèche 6) ne figure ni dans les statistiques du commerce spécial ni dans celles du commerce général.

Jusqu'à récemment il semblait plutôt indifférent que le commerce du Canada fût consigné suivant l'une ou l'autre base. Durant la période de 1952-1961 les marchandises passant par les entrepôts de la douane ont varié entre 3.1 p. 100 et 2.4 p. 100 de toutes les importations, et les réexportations à partir des entrepôts n'ont surpassé cinq millions de dollars qu'en 1952, 1953 et 1961. Bien qu'à compter de 1955 les stocks en entrepôt aient apparemment augmenté chaque année, les montants ont été très minimes n'excédant 10 millions de dollars qu'en 1956 et 1959.

La situation a changé lors de l'imposition d'une surtaxe sur la plupart des importations, en juin 1962, comme mesure temporaire de conservation du change. Les importateurs qui antérieurement n'avaient pas utilisé les aménagements d'entreposage douaniers commencèrent d'y laisser les stocks dans l'espoir que les surtaxes seraient révoquées avant qu'ils aient besoin des marchandises. Dans certains cas les importateurs ont constaté que cette mesure réduisait leurs frais, puisqu'ils ne devaient plus emprunter pour payer les droits d'importation avant d'avoir effectivement besoin des marchandises. Il en est résulté une montée en flèche de la proportion d'importations passant par les entrepôts, augmentation qui a persisté même après l'abolition des surtaxes, en avril 1963. De 143 millions de dollars qu'elles étaient en 1961, les importations qui sont entrées dans les entrepôts sont passées à 188 millions en 1962 et à 284 millions en 1963.

Le changement a commencé à créer des problèmes à la fin de 1962. Les discordances augmentaient entre les registres du commerce canadien dans le cas de certaines marchandises et les statistiques des pays partenaires. On s'est demandé si les statistiques du Canada seraient plus utiles si elles se rapportaient aux mouvements réels des marchandises plutôt qu'aux technicalités du dédouanement. Lorsqu'il est devenu évident que même après la disparition des surtaxes la tendance persistait vers l'usage de plus en plus général des entrepôts, il a été décidé de modifier la base de calcul des statistiques du commerce canadien.

Pendant un certain nombre d'années, les chiffres des exportations ou des importations canadiennes seront à peu près identiques sur l'une ou l'autre base du commerce général ou du commerce spécial, en raison du peu d'importance des exportations à partir des entrepôts. Chaque année, les chiffres des importations peuvent varier sensiblement parce que des marchandises mises en entrepôt au cours d'une année civile peuvent n'être dédouanées que l'année suivante et les stocks des entrepôts peuvent varier en fonction des fluctuations des taux d'intérêt ou de l'activité commerciale en général. Il se produira probablement un changement mensurable de la variation saisonnière du chiffre mensuel des importations. Il est reconnu, en général, qu'il entre plus de marchandises dans les entrepôts douaniers qu'il n'en sort durant les mois où la voie maritime du St-Laurent est ouverte à la navigation et qu'il en sort plus qu'il n'en entre lorsqu'elle est fermée. La modification à la base de l'enregistrement statistique des importations tendra donc à accentuer les fluctuations saisonnières existantes des chiffres des importations.

Il ne sera pas possible d'adapter les statistiques détaillées du commerce du Canada de 1963 à la nouvelle base. Les chiffres établis d'après les deux systèmes ont été publiés dans le bulletin mensuel de 1964 du B.F.S. *Summary of Foreign Trade* numéro de catalogue 65-001. Les autres publications mensuelles et trimestrielles sur le Commerce du Canada donnent, pour 1964, les chiffres du commerce général (nouvelle base), mais les chiffres comparatifs pour 1963 et les années antérieures demeurent sur la base du commerce spécial, d'après laquelle ils ont été initialement établis.

The following table presents import totals on the old and new bases for the period 1952-1963 and illustrates the main flows involved in this change of systems.

Le tableau qui suit donne les chiffres des importations suivant les deux bases pour la période de 1952-1963 et illustre les principaux mouvements que suppose le changement de système.

CONVERTIBILITY KEY TO OBTAIN 1964 COMPARISONS FROM 1963 AND 1962 IMPORT STATISTICS

The convertibility key shows, for each class of the Import Commodity Classification (MCC), whether comparisons can be obtained from 1963 and 1962 statistics and the degree of reliability that should be attached to such comparisons. It also indicates where groupings of 1963 and 1962 classes (or part of 1963 and 1962 classes) will complete comparisons for particular divisions or groups of the MCC.

The columns of the key contain the following information:

1. Column 1, "1964 classes" lists the codes of all classes for which statistics were compiled in 1964, and also codes for a few artificial group or division residual classes needed to improve comparisons between 1964 and earlier statistics. The key lists all classes in 1964 numeric order.

2. Column 2, "1963 classes" shows the 1963 class code or codes from which 1963 values for 1964 classes were derived.

3. Column 3, "1962 classes" shows the 1962 class code or codes different from 1963, from which 1962 values for 1964 classes were derived. Whenever the 1962 codes are the same as those used in 1963 the word "same" appears instead of a code.

4. Column 4, "1963 Equivalence" contains an alphabetic code indicating the quality of the comparison for 1963, and a numeric reference when required to explanatory footnotes at the bottom of the page.

5. Column 5, "1962 Equivalence" contains an alphabetic code indicating the quality of the comparison for 1962, which may or may not be the same as 1963, and a numeric reference to explanatory footnotes when required.

The alphabetic equivalence code is as follows:

Class Level Comparisons:

(a) 1963 or 1962 statistics believed to be almost comparable with 1964 (100% ± 5% discrepancy), within the limits of any qualifications set forth in footnotes.

(b) 1963 or 1962 statistics believed to be substantially comparable with 1964, but with the 1964 class including only 85% to 95% of the content of the 1963 or 1962 class or classes, and subject to any qualifications set forth in footnotes.

(c) 1963 or 1962 statistics believed to be substantially comparable with 1964, but with the 1964 class including a somewhat broader range of goods than the 1963 or 1962 class or classes (between 105% to 115%), and subject to any qualifications set forth in footnotes.

Group or Division Residuals:

(d) Identifies group residual classes which cover 1963 or 1962 values known to fall within a specific group of the MCC but which can not be allocated to specific classes. Footnotes indicate in every case whether the group residual completes the 1963 or 1962 total for the group and the quality of the resulting comparison. Fourteen such artificial group residuals were created. This technique is especially useful when 1963 or 1962 values for one or more former classes (or specific proportions thereof), can not accurately be converted to individual 1964 classes, but are known to account for the entire value of the group. These artificial group residuals make it possible to establish valid comparisons between 1964, 1963 or 1962 statistics for definite groups of homogeneous classes derived from broader former classes. They are all described in their corresponding footnotes.

CLÉ DE CONVERTIBILITÉ POUR OBTENIR DE LA STATISTIQUE DES IMPORTATIONS DE 1963 ET 1962 DES COMPARAISONS POUR 1964

La Clé de convertibilité montre, pour chaque classe de la Classification des marchandises d'importation (C.M.I.), si l'on peut tirer des comparaisons de la statistique de 1963 et 1962, ainsi que le degré de confiance que l'on peut avoir en ces comparaisons. Elle indique également si les regroupements des classes de 1963 et 1962 (ou une partie des classes de 1963 et 1962) complètent les valeurs, pour fin de comparaisons, d'une division ou d'un groupe en particulier de la C.M.I.

Les colonnes de la clé contiennent les renseignements suivants:

1. La 1ère colonne, "classes de 1964", donne les indicatifs de toutes les classes pour lesquelles la statistique a été établie en 1964 de même que ceux de quelques classes artificielles résiduelles de groupes ou divisions nécessaires pour améliorer les comparaisons entre 1964 et les statistiques antérieures. La clé énumère toutes les classes dans l'ordre numérique de 1964.

2. La 2e colonne, "classes de 1963", donne le ou les indicatifs de la ou des classes de 1963 desquelles les valeurs de 1963 pour les classes de 1964 ont été tirées.

3. La colonne 3, "classes de 1962", donne le ou les indicatifs de la ou des classes de 1962 qui diffèrent de ceux de 1963, desquelles les valeurs de 1962 pour les classes de 1964 ont été tirées. Partout où les indicatifs de 1962 sont les mêmes qu'en 1963, le mot "same", qui signifie "même", paraît plutôt qu'un indicatif.

4. La colonne 4, "équivalence de 1963", contient un indicatif alphabétique montrant la qualité des comparaisons de 1963 et une référence numérique au besoin aux renvois explicatifs du bas de la page.

5. La colonne 5, "équivalence de 1962", contient un indicatif alphabétique montrant la qualité de la comparaison de 1962, qui peut ou non être la même qu'en 1963, et une référence numérique aux renvois explicatifs du bas de la page en cas de besoin.

L'indicatif alphabétique d'équivalence est le suivant:

Comparaisons au niveau de la classe:

(a) Statistiques de 1963 ou 1962 jugées à peu près comparables à celles de 1964 (100% ± 5% de divergence) dans les limites de toutes réserves mentionnées dans les renvois.

(b) Statistiques de 1963 et 1962 jugées comparables en bonne partie à celles de 1964, mais la classe de 1964 ne contenant que 85% à 95% du contenu de la ou des classes de 1963 ou 1962, et sujette aux réserves mentionnées dans les renvois.

(c) Statistiques de 1963 ou 1962 jugées comparables en bonne partie à celles de 1964, mais la classe de 1964 contenant une gamme de marchandises quelque peu plus large que la ou les classes de 1963 ou 1962 (entre 105% et 115%) et sujette aux réserves mentionnées dans les renvois.

Classes résiduelles de groupes ou de divisions:

(d) Identifie les classes résiduelles de groupe qui couvrent les valeurs de 1963 ou 1962 connues comme s'inscrivant dans un groupe déterminé de la C.M.I. mais qui ne peuvent être attribuées à des classes précises. Les renvois indiquent dans chaque cas si la classe résiduelle de groupe complète le total de 1963 ou 1962 pour le groupe et la qualité de la comparaison résultante. Quatorze classes artificielles résiduelles de groupe ont été établies. Cette technique est particulièrement utile lorsque les valeurs de 1963 ou 1962 pour une ou plusieurs anciennes classes (ou proportions déterminées de celles-ci) ne peuvent pas être converties à des classes déterminées de 1964, mais que l'on sait être comptables de la valeur entière du groupe. Ces classes artificielles résiduelles de groupe permettent de faire des comparaisons valables entre la statistique de 1964, 1963 ou 1962 pour des groupes définis de classes homogènes tirées d'anciennes classes plus larges. Elles sont toutes décrites dans leurs renvois correspondants.

(e) Identifies residual classes which cover 1963 or 1962 values known to fall within a specific division, but which can not be allocated by class or group. These division residual classes are especially useful in allocating large heterogeneous former classes (mostly the "basket" or n.o.p. classes) which could not otherwise be distributed to particular classes or groups. The allocation of such classes is based on the two test months and the analysis of special records over a five-year period, and changes in their content were taken into account in allocating various percentages to different divisions in particular years.

They are listed at the beginning of their respective divisions and are identified by the terminal digits "00". Division residual classes always complete the 1963 and 1962 values for their division. It is believed that "a" quality comparison can always be made between division totals for 1962, 1963 and 1964.

(e) Identifie les classes résiduelles qui couvrent les valeurs de 1963 ou 1962 que l'on sait s'inscrire dans une division déterminée mais qui ne peuvent être réparties par classe ou groupe. Ces classes résiduelles sont particulièrement utiles dans la répartition d'anciennes classes hétérogènes (la plupart des classes "n.d.a.") qui, autrement, ne pourraient être attribuées à des classes ou groupes particuliers. La répartition de ces classes se fonde sur les deux mois de contrôle et sur l'étude de dossiers spéciaux durant une période de cinq ans et, dans la répartition des divers pourcentages entre les différentes divisions, certaines années, il a été tenu compte des variations de leur contenu.

Ces classes sont énumérées au début de leurs divisions respectives et s'identifient par leurs derniers chiffres "00". Les classes résiduelles de divisions complètent toujours les valeurs de 1963 et 1962 de celles-ci. On est d'avis, qu'une comparaison qualitative "a" peut toujours être établie entre les totaux des divisions pour 1962, 1963 et 1964.

461 – 1963 and 1962 values for class 901-49 are largely included with division residual 900-00.
462 – 1962 value for class 902-04 is included with class 902-45.
463 – 1963 and 1962 values for class 902-37 are included with class 902-99 and largely with division residual 900-00.
464 – 1963 and 1962 values for classes 902-73 and 902-80 are largely included with division residual 900-00.
465 – 1963 and 1962 values for class 904-04 are included with class 904-99.
466 – 1963 and 1962 values for classes 904-24, 904-32 and 904-89 are included with division residual 900-00.
467 – 1963 and 1962 values for class 904-99 are largely included with division residual 900-00.
468 – 1963 and 1962 values for class 905-49 are largely included with division residual 900-00.
469 – 1963 and 1962 values for classes 911-11, 911-18 and 911-39 are included with division residual 910-00.
470 – 1963 and 1962 values for class 911-49 are largely included with division residual 910-00.
471 – 1963 and 1962 values for classes 912-04 and 912-08 are included with class 912-19.
472 – 1963 and 1962 values for class 915-13 are included with class 915-39.
473 – 1963 and 1962 values for class 915-64 are included with class 915-69.
474 – The allocation of 1962 class 4187 is based on two test months and the analysis of unpublished records.
475 – 1963 and 1962 values for classes 918-13 and 918-39 are believed to be overstated by an estimated 70% and 50% respectively. Special surveys undertaken at the beginning of 1964 and enquiries sent indicate that a large proportion of motion picture and educational films entering the country and formerly coded in classes 9011 and 9148 were on a rental basis and should have been coded to former class 9990 in 1963 or 1962 and are properly coded to class 990-85 since January, 1964.

459 – Les valeurs des classes 901-19 et 901-28 pour 1963 et 1962 sont incluses dans la classe résiduelle de division 900-00.
460 – La valeur de la classe 901-24 pour 1963 et 1962 est incluse dans la classe 901-49.
461 – La valeur de la classe 901-49 pour 1963 et 1962 est incluse, en majeure partie, dans la classe résiduelle de division 900-00.
462 – La valeur de la classe 902-04 pour 1962 est incluse dans la classe 902-45.
463 – La valeur de la classe 902-37 pour 1963 et 1962 est incluse en partie, dans la classe 902-99 et en majeure partie, dans la classe résiduelle de division 900-00.
464 – Les valeurs des classes 902-73 et 902-80 pour 1963 et 1962 sont incluses, en majeure partie, dans la classe résiduelle de division 900-00.
465 – La valeur de la classe 904-04 pour 1963 et 1962 est incluse dans la classe 904-99.
466 – Les valeurs des classes 904-24, 904-32 et 904-89 pour 1963 et 1962 sont incluses dans la classe résiduelle de division 900-00.
467 – La valeur de la classe 904-99 pour 1963 et 1962 est incluse, en majeure partie, dans la classe résiduelle de division 900-00.
468 – La valeur de la classe 905-49 pour 1963 et 1962 est incluse, en majeure partie, dans la classe résiduelle de division 900-00.
469 – Les valeurs des classes 911-11, 911-18 et 911-39 pour 1963 et 1962 sont incluses dans la classe résiduelle de division 910-00.
470 – La valeur de la classe 911-49 pour 1963 et 1962 est incluse, en majeure partie, dans la classe résiduelle de division 910-00.
471 – Les valeurs des classes 912-04 et 912-08 pour 1963 et 1962 sont incluses dans la classe 912-19.
472 – La valeur de la classe 915-13 pour 1963 et 1962 est incluse dans la classe 915-39.
473 – La valeur de la classe 915-64 pour 1963 et 1962 est incluse dans la classe 915-69.
474 – La répartition de la classe 4187 de 1962 se fonde sur les deux mois de contrôle et sur l'analyse de renseignements non publiés.
475 – Les valeurs des classes 918-13 et 918-39 pour 1963 et 1962 semblent surévaluées dans une proportion d'environ 70% et 50% respectivement. Certaines études spéciales faites au début de l'année 1964 ainsi que des enquêtes menées auprès des importateurs révèlent que la majorité des films cinématographiques et des films éducatifs qui arrivaient au pays et étaient codifiés sous les anciennes classes 9011 et 9148 étaient simplement sous location et auraient dû être codifiés sous la classe 9990 en 1963 ou en 1962, mais sont maintenant correctement codifiés sous la classe 990-85 depuis janvier 1964.

499 – The allocation of 1963 and 1962 class 8450 is based on two test months and the analysis of unpublished records.

500 – 1963 and 1962 values for class 970-99 are made up of imports classified on end use basis in 1963 or 1962 (chiefly articles ex-warehoused for ships' stores) and which could not be converted accurately to a commodity class. The goods formerly included in these classes were classified by commodity beginning with 1964 statistics.

501 – A new concept introduced in the treatment of gold in January, 1964, resulted in a change in the classification of quantities and values of gold. For comparison purposes 1964 values for classes 990-05 and 990-25 should be added to compare with 1963 or 1962 values for classes 9905 and 9925 combined.

499 – La répartition de la classe 8450 de 1963 et 1962 se fonde sur les deux mois de contrôle et sur l'analyse de renseignements non publiés.

500 – La valeur de la classe 970-99 pour 1963 et 1962 comprend les articles d'importation codifiés d'après leur usage final en 1963 et 1962 (surtout les articles allant de l'entrepôt des douanes aux navires) et qui ne pouvaient pas être attribués avec précision à une classe de marchandises. Depuis 1964, les marchandises autrefois comprises dans ces classes sont codifiées par denrée.

501 – À compter de janvier 1964, on a donné une interprétation nouvelle à l'or brut et l'or affiné, ce qui a eu pour résultat d'apporter un changement dans la classification des quantités et des valeurs de l'or. Pour fins de comparaison on doit additionner les valeurs des classes 990-05 et 990-25 pour 1964 et les classes 9905 et 9925 pour 1963 ou 1962 avant d'établir des comparaisons valables.
